### **Description :**

- ***G & L TECHNOLOGIES LPS-36T, Shutter Productions System***

Automatic, hopper-fed continuous operation machine; automatically performs the process steps of louver end-sanding, drilling, pinning, and tilt-rod stapling in the production of wood & Polywood shutters.

- Handles flat or tapered louvers from 6" - 36" in length with a variation of up to 1/16" on a specific length setup; 0.3" - 1/2" thickness and 1-7/8" - 5-1/2" width; louver material can be wood or Polywood.
- Includes: PLC Control with keypad & LCD display for setup & function control, such as index speed, spacing, system staple, drill & pin sequencing, and parts feed, additional accessories.
- Requirements: 90 PSI Air at 15 SCFM min. and an outfeed table which accepts tilt rod assemblies (not included).
- System basically takes all the individual components (louver blade, tilt rod staples, pivot pins, and tilt rod itself) and produces a semi-finished louver without the stiles & rails.
