Description :

TEAM B & B DSU 200, Tilt Rod Stapling Machine

The DSU200 staples the louvers directly to the tilt rod. The tilt rod is laid into the channel which has linear bearings to allow easy movement up and down the table. The precise location for either 2", 3" or 4" spacing between louvers is set with the index dowel pins.

- The louver is placed into the guide, and the staple gun is triggered by the operator when it is in the correct position. Once stapled, the ratchet system moves the tilt rod and the attached louvers to the next position.

NOTE: Missing Tilt Rod Carrier
