Description :

- **ONEIDA AIR SYSTEMS SAZ10000C Rotary Air Lock**

ONEIDA Air Locks use a high-efficiency helical drive, US-made 0.25 HP hollow shaft gear motor to control the flow of discharge material from the dust collector via a rubber-padded wheel that rotates at a preset speed. The airtight seal with the collector is maintained at all times, ensuring peak airflow performance while waste is continuously deposited into open bins, industrial hoppers, or transfer blower systems.

Specifications:

- 10" Dia. flange ideal for use with many of our professional and industrial systems, including the High Vacuum dust collector (with custom clean-out cone).
- US-made 0.25 HP hollow shaft Helical gear motor.
- Impeller Type, welded steel with industrial, replaceable rubber paddles.
- Inlet/outlet 10" round.
